

AMENDMENTS TO THE SPECIFICATION

Pages 8-9, please replace the paragraph bridging the pages with the following amended paragraph:

If the symbol 24 is located at a different location, for example, at or adjacent the focus F2 in FIG. 3, where F2 is smaller than F1, then a drive ~~60~~ 58 operatively connected to at least one of the prisms, for example, prism 40, is operative to move the prism 40 relative to the other prism 42 along a drive direction. The drive ~~60~~ 58 could be operatively connected to both prisms 40, 42 to simultaneously move both prisms toward or away from the path 44. Each prism has a variable cross-section that preferably increases in opposite directions perpendicularly of the path 44. The movement of the prism is preferably performed in an analog, continuous manner.
